SUMMARY

Cybersecurity Engineering student at ENSA Tetouan specialized in Purple Team operations, bridging rigorous offensive penetration testing (Network/Web/Active Directory) with certified incident detection, threat intelligence, and response. **eCPPTv3, eWPTX, and eCIR certified**, with proven expertise in advanced web application exploitation, WAF evasion, and simulating adversarial behavior while performing deep-dive forensic investigations inside enterprise-tier architectures.

PROFESSIONAL CERTIFICATIONS

eWPTX - Web App Penetration Tester eXtreme , INE Security	Sept 2026
eCIR - Certified Incident Responder , INE Security	June 2026
eCPPTv3 - Certified Professional Penetration Tester , INE Security	Oct 2025
Google Cybersecurity Professional Certificate , Coursera	Mar 2025
Active Directory Enumeration & Attacks , HackTheBox Academy	2025

PROFESSIONAL EXPERIENCE

Offensive Security Engineering Intern – Atlas Defenders	Jan 2026 – May 2026
- Executed full-scope internal and external penetration testing methodologies against Active Directory environments, leveraging tools like BloodHound and Impacket to map network-wide privilege escalation pathways. - Authored technical remediation reports and Proof-of-Concepts (PoCs) detailing critical web and host-level system misconfigurations for infrastructure stakeholders.	
Cybersecurity Intern – Deltaware Solutions (Remote)	Nov 2025 – Jan 2026
- Performed automated and manual web application security assessments, leveraging OSINT techniques and mapping attack surfaces. - Conducted managed phishing simulations to evaluate corporate social engineering vulnerability baselines.	

EXTRACURRICULAR ACTIVITIES & CTFS

DGSSI MAC 2026 CTF – National Representative, ENSA Tetouan	Apr 2026
- Competed in the national-level event hosted by DGSSI and SecDojo; secured Rank 32 nationally out of elite teams with 1235 points. - Successfully exploited 8/9 target machines across Basic, Intermediate, and Advanced tiers; captured initial entry flags on the Advanced Active Directory infrastructure box (AD105).	
AUSIM CyberDrill Morocco (Finals)	Jan 2026
- Selected for the 18-hour continuous final infrastructure defense and assessment exercise managed via SecDojo labs. - Investigated web exploitation vectors, multi-forest Active Directory compromises, and performed live DFIR log analysis via Splunk.	
CTF Organizer & Cryptography Author – Eclipse CTF	May 2026
Designed and deployed original vulnerable cryptography challenges centered around custom padding oracle attacks and algorithmic flaws for the academic community.	
Co-author & Community Contributor – Security Eagles	eJPTv2 Guide
Collaborated with a team of researchers to compile and publish an open-source technical handbook covering eJPTv2 examination vectors, downloaded widely across local cybersecurity groups.	

ACADEMIC PROJECTS

API Security Assessment Laboratory

Jan 2026

- Designed a black-box evaluation workflow auditing input validation routines across targeted production REST API architecture endpoints.
- Demonstrated multi-vector exploit execution by chaining **BOLA (Broken Object Level Authorization)** bypasses with programmatic rate-limiting extraction mechanisms.

Smart Parking – Hardened IoT & Full-Stack Platform

[GitHub](#)

- Developed an end-to-end microcontroller parking system using an ESP32 framework with local network communication routing.
- Evaluated the physical hardware access attack vectors by implementing secure authentication verification routines for local RFID scanning systems and peripheral sensors.

Synthesizable UART Controller for FPGA

[GitHub](#)

- Developed a modular, low-level synthesizable UART transceiver using VHDL; simulated functional bus verification tests inside ModelSim environment setups.

TECHNICAL SKILLS & CORE COMPETENCIES

Security Disciplines: Advanced Web App Penetration Testing (WAF Evasion, Deserialization, SSRF), Active Directory Domain Pivoting, Threat Hunting, Incident Detection & Triage (SIEM, IDS), Log Correlation, Threat Intelligence (MITRE ATT&CK), Network Traffic Analysis, Memory & Disk Forensics.

Security Tooling: Burp Suite Professional, Splunk SIEM, ELK Stack, BloodHound, Impacket, Metasploit, Nmap, Wireshark, Ghidra, Sysinternals

Languages & Frameworks: Python, C/C++, Java, VHDL, Assembly (AVR), PHP, SQL, JavaScript

Languages: Arabic (Native), English (Fluent), French (Fluent)

EDUCATION

State Engineering Degree: Cybersecurity & Embedded Systems – ENSA Tetouan, Morocco

Expected 2027

Baccalaureate in Physical Sciences – Highest Honors, Morocco

2019 – 2022
